EXPERIENCE

Founders Network, San Francisco. — Software Engineer

April 2024 - Present – Full Stack Developer

- Working in React with typescript and Next.js to maintain and develop new features for LinkedIn style subscription based networking platform for startup founders and investors
- Writing new endpoints and database manipulations for a Python + Django rest api

Rebellion Defense, Washington D.C. — Software Engineer

February 2023 - January 2024 – Full Stack Developer

- Working in React with typescript to build a robust user interface to display client data and analytics for the U.S. Air Force
- Writing a Python api that supports GraphQL on the frontend
- Working in Vue.js to create geospatial data visualizations on a map

Zenlist Inc, San Francisco — Software Engineer

August 2020 - June 2022

- Learned React Native on the job to join the mobile app team and worked asynchronously with the developers across multiple timezones..
- Worked with backend engineers to implement a proprietary chat platform based on product designs that included sharing media, internal links and group messaging with push notifications.
- Worked independently to implement designs for the profile section in the latest release of our web app that allows 65,000+ users to update personal info, notification settings, Stripe billing, MLS memberships and Zapier integrations.
- Built a custom library of styled components based on our product style guide and implemented Storybook to document their use cases.
